

Every email provider has different safelisting procedures, so it's hard for us to provide any one-size-fits-all instruction on what to do. For example, some providers only allow you to safelist by sender address or domain, in which case you'll want to make sure to safelist ***memberclicks-mail.net***.

An email administrator should understand and be able to fill an IP safelisting request, but if you're in need of assistance, here are instructions for adding to a safelist in some commonly used email providers:

Safelist *IPs*

- G Suite (Google) - <https://support.google.com/a/answer/60751?hl=en>
- Outlook 365 - <https://support.knowbe4.com/hc/en-us/articles/218134997-Whitelisting-by-IP->
- BlueHost - <https://my.bluehost.com/cgi/help/308>

Safelist a *Domain*

- Mac Mail - <https://www.lifewire.com/whitelist-domain-os-x-mail-1172857>
- GoDaddy Workspace Email - <https://www.godaddy.com/help/use-spam-filter-settings-2832>
- Outlook - <https://www.extendoffice.com/documents/outlook/1242-outlook-add-domain-to-safe-sender-list.html>
- Free webmail (Outlook.com, Gmail, Yahoo) - <http://onlinegroups.net/blog/2014/02/25/how-to-whitelist-an-email-address/>
- Network Solutions - <http://www.networksolutions.com/support/report-spam-manage-blacklist-whitelist-in-webmail/>

The IP addresses that need to be safelisted are:

168.245.116.231

168.245.127.241

168.245.20.17

168.245.25.254
